Section A-A
Not to Scale

Notes:
1. Overland Park Municipal Code (OPMC) and Overland Park Design and Construction Standards Manual (OPDCSM) are incorporated, except as otherwise noted.

2. Temporary diversion berms must be installed on a first time in the land-disturbing activity and must be functional prior to unique land disturbance.

3. The berm should be adequately compacted to prevent failure.

4. Temporary or permanent seeding and mulch shall be applied to the berm immediately following its construction.

5. Place the berm so as to minimize damages by construction operations and debris.

6. The berm must discharge to a temporary sediment trap or stabilized area.

7. All trees, shrubs, structures and other objectionable material must be removed and disposed of as or not to interfere with the proper function of diversion.

8. The diversion shall be excavated or stripped to line, grade and cross-section as required to meet the criteria specified herein, free of irregularities which will impede flow.

9. A liner shall be constructed as needed to prevent uncontrolled settlement that would cause damage in the completed diversion. All fill shall be composed of soil which is free from excessive organic debris, rocks or other objectionable material.

Maintenance:
Berm shall be reshaped, compacted, and stabilized as necessary to maintain its function. Therefore, the berm shall be repaired immediately.
