Legend

- Biodegradable Barrier
- Disturbed Area
- Surface Water Runoff Direction
- Most Arm Pipe Elevation
- Pneumatic Pipe
- Type I Service Box
- Streetlight Pole

General Notes:
1. Biodegradable Fencing (BDF) shall be installed and maintained as necessary to reduce the amount of sediment or other pollutants in stormwater discharges associated with the project. All work shall be paid for all the time while the fence is in place as directed by the Engineer.
2. Do not perform any kind of disturbance with erosion and sediment control BMP's are in place and approved by the Engineer.
3. These plots are intended to convey typical conditions and BMPs that may be necessary to control erosion and sediment. All plots are intended to show all possible water bodies. The contractor shall be required to install all necessary BMP's at locations as determined by the Engineer.
4. The contractor is required to have good control over all storms. It is not permissible to have the control on the same day, all work area shall be covered with materials that are commonly used that the work is not shown off during leaky storms.
5. The contractor shall place any and all materials or equipment or laundry or other hard surfaces that would contribute to sediment washing into storm drains.
6. The contractor shall maintain all concrete without any soil or rock foundations to clear out in an established temporary joint.
7. Water conduit or drainage pipe shall be used to contain sediment when pumping water out of dry conduction areas or other areas.
8. Temporary erosion control blankets shall be used to contain disturbed areas that are wetting future and construction, especially when control is necessary.
